

Porsche

FIKSE USA is not affiliated with Porsche AG or Porsche Cars of North America.

Selecting wheels for your car is much like having a fine suit tailored or having handmade shoes crafted. It is a personal experience that differs for every person. The time taken evaluating options and determining correct fitment will be rewarded with optimum performance.

The foundation of FIKSE USA wheels is forged 6061-T6 aluminum. The precision rotary forging process produces a forged metal with a radial grain – the strongest type of internal structure possible – to achieve maximum strength at minimum weight. Jewel-like finishes are

created by diamond turning and machine milling to ultra-precise tolerances. Rim halves spun and work hardened by computer-numerically-controlled machines mate with machined wheel centers to produce a precision, registered pilot fit with a total run-out of less than .20 millimeters.

FIKSE USA modular construction allows wheels to be tailored to specific performance goals so that the wheels work together with the chassis, suspension and tires in finely tuned harmony. The result is improved acceleration and braking with a more tactile ride quality and superior handling.

To provide assurance of the finest quality and exclusivity, each FIKSE wheel is engraved with the FIKSE name and a unique serial number which certifies the processes used in producing each wheel – down to the day and hour of production and the sources of all component materials.

FIKSE USA technicians look forward to working with you to optimize the performance of your Porsche.

Advantages of Fikse Wheels for Porsche Vehicles

- reduced overall weight for improved acceleration and braking
- reduced unsprung weight for enhanced ride and handling
- deep-pad fitments allow for massive caliper and rotor clearance
- rear-bolted fasteners for reduced weight and easier maintenance
- TUV approved in Germany, recognized as the world's highest quality level
- improved brake performance with increased air flow through spokes
- corrosion protective finishes for enhanced aesthetics and ease of cleaning
- built to order with tailored fitments
